Tunis 2023

Dr. Fares Lubbadah , CEO of SpaceTech TV Engineering , Chairman of Arab HDTV & Beyond Group, attended the ASBU 23rd Arab Festival of Radio & Television in Tunis from 12th to 15th June 2023, where he chaired the engineering seminar on Artificial Intelligence with the participation of Eng. Mohamed Elbashir , META @ Strategis Governance Tech & Policy Public Global ; Dr. Hasan Mustafa , expert in Digital Information Technology , professor @ UAE universities; Mr. Fred Petitpon , CoFounder & CTO of Newsbridge and Eng. Sameer Al-Jumai, Head of New Information Office at ASBU.

The benefits of artificial intelligence are exciting, to say the very least. Certainly a shift to such a hugely impactful technology has its downsides as well. The increased infringement on our privacy, the complacency that can come with having a computer make many of our decisions for us, and just the general transfer of control to intelligent programs can be a little scary to consider. But all that said, it's pretty clear that AI will improve just about every single way we produce and consume media entertainment for decades to come. Currently, AI does not have a comprehensive regularity scheme in place. However, regulators around the world are moving towards AI regulation.
